

(Shown here on Spectrum Series)

The AcousticPro UHD (ultra-high definition) is a moiré-free self-supported acoustically transparent front projection screen material. The dense synthetic weave is compatible with Ultra-High Definition/4K resolutions while mitigating light penetration for a brighter picture. The AcousticPro UHD design maximizes sound penetration with minimal attenuation without compromising picture quality. The AcousticPro UHD material's wide diffusion uniformity offers a broad viewing angle with superb picture quality across the entire surface. This provides equal brightness levels on or off axis.

On-axis 0° Gain: 1.0
Viewing Cone: 180°

**Elite Screens Series:
Spectrum, Saker Tension, Evanesce, VMAX Dual, and Aeon Series**

- Gain: 1.0
- Viewing Angle: 180° (90°L/R)
- Moiré-free
- Wide diffusion uniformity – maintains luminance levels throughout entire surface
- Mildew Resistant
- Flame Retardant
- 4K UHD and Active 3D ready
- Not compatible with Ultra/Short-throw Projectors
- Mean Attenuation: -2.36dB
- Complies with NFPA 701 Standards
